SUMMARY

Software Engineer and Computer Engineering student at the German Jordanian University, specializing in the design and delivery of end-to-end web applications. Experienced in leading the full product lifecycle, from customer discovery and system architecture design to backend development, database engineering, testing, and cloud deployment.

Founder & CTO of **DineLink**, an AI-powered restaurant management startup, and selected among the **Top 100 global innovators** at the Falling Walls Foundation (Berlin) from 2,700+ applicants worldwide. Passionate about building scalable systems that solve real-world business problems through strong engineering principles and product-driven thinking.

SKILLS

- **Programming Languages:** JavaScript (ES6+), TypeScript, Python, Java, C, C++, and x86 Assembly.
- **Web Development:** Next.js, React.js, Vue.js, Vite, Node.js, Tailwind CSS, HTML5, CSS3, responsive UI development, dashboard development, and data visualization.
- **Backend & APIs:** NestJS, FastAPI, Node.js, RESTful API design, front-end/back-end communication, backend architecture, ML model integration, and real-time prediction pipelines.
- **Databases & Data Management:** PostgreSQL, MySQL, Supabase, database design, relational data modeling, real-time data handling, and authentication.
- **AI, Machine Learning & Signal Processing:** Machine Learning applications, SVM classification, feature extraction, FFT analysis, filtering, window segmentation, normalization, IMU sensor-data processing, activity recognition, signal processing pipelines, LLMs, and MediaPipe for real-time landmark detection.
- **DevOps & Deployment:** AWS, Hetzner, Netlify, Git/GitHub, CI/CD pipeline management, GitHub Actions, Docker containerization, Kubernetes orchestration, and Linux.
- **Networking & Protocols:** TCP, UDP, HTTP/HTTPS, DNS, WebSockets, foundational network architecture, and distributed systems communication.
- **Cybersecurity:** Hands-on security techniques through NCSC "Cyber Warriors" training, secure development awareness, and basic web application security principles.
- **Software Engineering Fundamentals:** Data Structures, Algorithms, Object-Oriented Programming, clean code principles, testing, modular architecture, and full product lifecycle development.
- **Product & Business:** Product design, startup validation, market research, entrepreneurship, customer discovery, technical roadmapping, pitching, and client requirement analysis.
- **Leadership & Languages:** Technical directing, mentoring, team leadership, cross-functional collaboration, native Arabic, C1 fluent English, and A2 German.

EXPERIENCE

H2O Digital Solutions | *Front-End Lead* | Nov 2025 – Present

- Collaborated directly with founders to translate product requirements into technical roadmaps for a team of 6 developers.

DineLink (Startup) | *Founder & CTO* | Feb 2025 – Present

- Conducted market validation through interviews with 15+ local restaurant owners to define core AI management features.
- Developed a prototype that secured 1st place at Falling Walls Jordan 2025 among 50+ competing innovators.

Falling Walls Foundation | *Ambassador – Jordan* | Apr 2026 – Present

- Selected to serve as a Falling Walls Foundation Ambassador in Jordan, supporting the annual Falling Walls Lab events at the German Jordanian University and Birzeit University.
- Invited to speak during the Amman and Ramallah events, sharing personal experience as a previous Falling Walls winner and global finalist.
- Mentoring participants during the program by providing guidance on pitching, idea development, and innovation presentation.

Freelance Full-Stack Developer | Feb 2025 – Present

- Delivered 9+ full-stack web applications for small business clients using React and Node.js within strict 4-week deadlines.
- Managed the end-to-end lifecycle of projects, from initial UI design to final deployment on **Netlify and AWS**.

GDG Amman | *Technical Director* | Aug 2025 – Present

- Co-organizing technical workshops and hackathons for a community of 3,000+ members in the Amman tech ecosystem.
- Engaging in community-driven projects to promote modern web and AI technologies.

AgentX | *Software Engineer* | Nov 2025 – Feb 2026

- Built the official website for a Jordan-based startup using React.js and Tailwind CSS.
- Delivered a responsive, production-ready UI aligned with business requirements.

TEDx Tabarbour | *Front-End Developer* | Sep 2025 – Feb 2026 | [TedxTabarbour**](#)**

- Building the official event platform using React and CSS to serve an expected audience of 500+ attendees.
- Implemented automated CI/CD pipelines using GitHub Actions, reducing manual deployment time by 10 minutes per build.

TEDxGJU — Full-Stack Developer & Technical Support | Nov 2025 (Two Weeks) | Amman

- Developed a custom ticketing system that successfully processed more than **150 registrations** in a high-traffic environment.
- Provided real-time technical troubleshooting for check-in systems, ensuring **zero delays** during the event entry phase.

Prodigy InfoTech – Web Development Intern | Oct 2025 – Nov 2025 | Remote, Mumbai

- Completed a one-month remote internship focused on modern **web development** practices.
- Worked on responsive UI components, layout design, and front-end functionality.
- Applied **React** and **JavaScript** to develop and refine web pages for client projects.
- Gained experience collaborating remotely with a global technical team.

EDUCATION

German Jordanian University (GJU) – B.Sc. Computer Engineering; 2023 – present

- Coursework in computer engineering, algorithms, software development, and AI applications.

- Actively involved in innovation, entrepreneurship, and national competitions.

PROJECTS

HydroSense Jordan – Team Leader & ML Developer | 2026 – Present |

- Leading the development of HydroSense Jordan, an IoT-based water monitoring solution focused on cost-effective sensing, data processing, and real-time analysis.
- Designed a shared hub architecture to reduce hardware costs and improve scalability across multiple sensing units.
- Working on the machine learning model and signal processing pipeline to improve data interpretation, sensor reliability, and water-quality insight generation.

Haitham Haddad Barbershop Platform (In Progress) – Full-Stack Developer | 2026 | [Demo](#)

- Developing a full-stack appointment platform for a local barbershop in Jordan using Next.js and Tailwind CSS.
- Implementing backend logic with Next.js API routes and PostgreSQL for booking management and data persistence.
- Designing a responsive, production-ready interface optimized for mobile users.

DineLink (Startup) | Founder & CTO | Feb 2025 – Present | [DineLink](#)

- Designed and validated an AI-powered restaurant management platform, winning **1st place** at Falling Walls Jordan 2025 among **50+ innovators**.
- Led end-to-end product vision, user research, and market positioning, representing Jordan at the **Global Finals in Berlin**.
- Conducted market validation through interviews with local restaurant owners to define core AI features for optimized operational efficiency.

GJU Solar Energy Visualization– Algorithm & Dashboard Developer | Feb 2026 – Present |

- Developing a real-time visualization dashboard for solar panel energy generation and estimated CO₂ savings at the German Jordanian University.
- Implementing the algorithms required to calculate generated power and saved CO₂ in real time based on solar panel data.
- Designing dashboard visualizations that transform energy data into clear, understandable insights for monitoring sustainability impact.

MedModelle E-Commerce – Full-Stack Developer | Mar 2026 – Apr 2026 | [medmodelle](#)

- Delivered a complete e-commerce website for a Jordan-based client, handling the full development lifecycle from frontend and backend implementation to database design and deployment.
- Built the platform using Next.js, NestJS, and PostgreSQL, including product management, database structure, API development, and production deployment.
- Managed the project end-to-end, translating client requirements into a functional, scalable, and production-ready online store.

Human Activity Recognition System – ML & Full-Stack Developer | 2026 | [Link to Repo](#)

- Built a full-stack Human Activity Recognition system that classifies human activities from accelerometer and gyroscope IMU sensor data using a trained SVM model.
- Implemented a FastAPI backend with a signal processing pipeline for filtering, window segmentation, feature extraction, normalization, and activity prediction.
- Developed a React and Tailwind CSS dashboard with drag-and-drop file upload, real-time analysis, confidence scores, FFT visualizations, and responsive results pages.

Driver Monitoring System | Python, MediaPipe, OpenCV Dec 2025 | [Link to Repo](#)

- Developed a real-time safety application using Python and MediaPipe to monitor driver alertness and prevent accidents by detecting fatigue and distraction.
- Implemented signal processing to track Eye Aspect Ratio (EAR), Mouth Aspect Ratio (MAR), and Head Pose Estimation for high-accuracy drowsiness and yawn detection.
- Engineered a modular architecture featuring dedicated calibration logic and a unit testing suite to ensure signal stability and threshold reliability.

OneSalt E-Commerce – Full-Stack Developer July-Aug 2025 | [Wearonesalt](#)

- Delivered a complete e-commerce website for a Jordan-based client, handling the full development lifecycle from frontend and backend implementation to database design and deployment.
- Built the platform using React.js, Node JS, and PostgreSQL, including product management, database structure, API development, and production deployment.
- Managed the project end-to-end, translating client requirements into a functional, scalable, and production-ready online store.

COMPETITIONS & ACHIEVEMENTS

- **Speaker & Finalist – Falling Walls Breakthrough of the Year (Berlin);** recognized as one of the top 100 global innovators selected from 2,750+ applicants across 60 countries. [link](#)
- **Speaker & University Representative – Eighth Arab Youth Conference;** nominated to present the success story of the **DineLink** startup and its international competition victory.
- **The youngest finalist at the Falling Walls Finals,** pitching the **DineLink** startup alongside international professors, PhD holders, and researchers.
- **Winner – Falling Walls Lab Jordan 2025 (DAAD);** secured **1st** place nationally to represent Jordan on the global stage in Berlin. [Link](#)
- **Winner – The Business Game (TTi);** received mentorship program with Ecoventure.
- **Finalist – National Technology Parade (HTU).**
- **Finalist – Queen Rania National Entrepreneurship Competition (PSUT);** completed 49 hours of mentorship training with QRCE.
- **Finalist – GJU 3030 Innovation Competition (GJU).**
- **Participant – Database Hero (HTU)**
- **Participant – AI Innovators Hackathon (UOP).**
- **Participant – Application Development Hackathon (GJU).**
- **PwC Mentorship Program mentee.**
- **GJU Incubation Program participant.**
- **Cyber Warriors Training, NCSC –** intensive cybersecurity training program.
- **Hands on Apex (GJU) –** Accelerated Web Application Development

CERTIFICATES

- **Oracle Apex –** GJU. 2025
- **Git & GitHub –** GJU IT Club. 2025
- **Front-End Development –** GJU IT Club. 2025
- **Object-Oriented Programming –** GJU. 2024
- **Code for Palestine –** Paltel. 2020
- **Problem Solving –** Paltel. 2020
- **C++ Programming –** Paltel. 2020
- **ICDL –** Galaxy Academy. 2018
- **Leadership Development –** Bsharat Academy. 2018

LANGUAGES

- Arabic (native)
- English (fluent, **C1 certified**)
- German (A2)
